

Embedding Tweets on a FASC Site

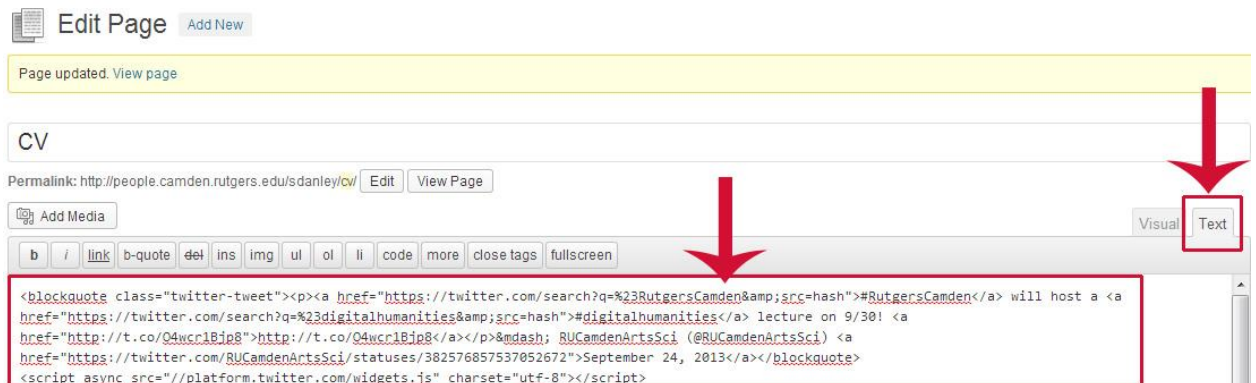

- 1) Log into your Twitter account and click on the Tweet that you want to embed into your website.

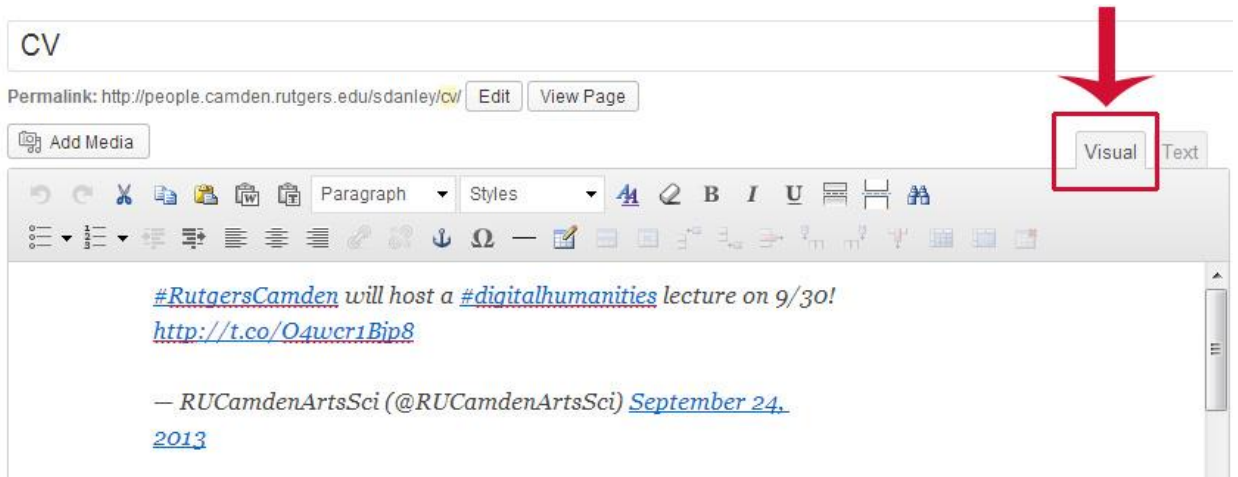

- 2) Click on "...More" link and then click the "Embed Tweet" link.

- 3) Copy the code and then go to your website and edit the page/post you want to add the Tweet to.

- 4) Click the "Text" tab and then paste the Twitter code into the editor box.

- 5) Click the "Visual" tab and then click the Update button to save your page (or click "Publish" to publish your post).

This should be the last thing you change on your page before updating. Once you've saved it, made more changes, and update again, the Twitter Card will lose its formatting.
